

TEST PLAN – „PAYCHI” WEB APPLICATION

Educational project | Author: Joanna Brodowicz | Version: 1.0

1. PROJECT OVERVIEW

Paychi is a simple web application designed for planning shopping lists, monitoring expenses and calculating cost sharing of purchases.

The application's structure is based on the following modules:

- Dashboard
- Friends
- Groups
- Shopping List (Personal and Group)
- Expenses (Personal and Group)
- User profile

The app can be used individually or in groups. To plan group shopping and expenses lists, users must invite friends and create a group with them.

The target audience of the application consists of individuals, families, flatmates.

2. TEST OBJECTIVE

The main objective of the tests is to verify key functionalities of the application and interface quality.

3. SCOPE

The following types of tests will be carried out as part of the testing process:

1. Functional
2. Regression
3. Visual testing (responsiveness and UI consistency)

The following will be omitted from the tests:

1. Security tests
2. Performance tests

All test cases will be designed using black-box testing techniques, focusing on inputs and outputs without looking at the internal code structure.

The tests cover the following elements:

1. Registration and login
2. Inviting, removing and accepting friends
3. Creating a group and inviting/removing members
4. Changing group member roles

5. Group members permissions
6. Creating and deleting personal and group shopping lists
7. Adding and removing items
8. Creating and removing expenses
9. Calculating expenses
10. Calculating cost sharing
11. Form and fields validation
12. Responsiveness (Devtools emulation)

Responsiveness tests cover the following resolutions:

- mobile: 360×640px
- tablet: 768×1024px
- laptop: 1920×1080px

4. ENTRY CRITERIA

- access to the test environment,
- a stable version of the application.

5. EXIT CRITERIA

- completion of all functional and visual tests,
- reporting of all defects found,
- all critical bugs fixed and regression passed.

7. TESTING TOOLS

1. Defect reporting: Jira,
2. Test case design: Excel
3. Responsiveness: DevTools (Chrome and Firefox).
4. Screenshots: ShareX, PickPick.

10. TEST ENVIRONMENT

Browsers	Chrome 147.0.7727.117, Firefox 149.0.2
Operating Systems	Windows 11, Android 14
Devices	Laptop, mobile

10. FINAL DELIVERABLES

- test plan,
- test cases,
- bug reports.
